

Heightened macro and geopolitical concerns

The third quarter was a disappointing one for SKAGEN Kon-Tiki as heightened macro and geopolitical concerns weighed on global equities and emerging markets in particular. The most important change in investor perceptions was brought about by the significant reversal in US interest rate expectations since the start of the year. As the negative effects of the slowdown in global trade on the back of souring US-China relations have become increasingly tangible, the US Federal Reserve countered with two rate cuts over the summer months. While supportive in isolation, the first rate cuts in 11 years suggest that the post financial crisis economic expansion may have run out of steam, at least temporarily. We also saw broad-based monetary policy responses across emerging markets with India also announcing a well-received corporate tax cut.

A more cautious economic backdrop is particularly pronounced in export-sensitive economies such as Germany, which reported a material drop in manufacturing and export activity. The spillover to emerging markets has been significant, with investors again seeking safe(r) havens, which has weighed on cyclical industries in particular.

This has also affected SKAGEN Kon-Tiki, which lagged the benchmark index by more than 4% during the quarter. The most significant negative contributors were our holdings in the energy and commodities sectors where falling commodity prices and generally higher levels of financial gearing weighed on equity returns. At company level, we suffered a significant drawdown in Canada-listed Turquoise Hill Resources whose Mongolian copper mine expansion at Oyu Tolgoi in Mongolia has run into delays and cost overruns. While the company has sufficient liquidity to continue the expansion until 2021, our recent site visit confirmed that

additional financing and local political support will be required to complete the project. While Borr Drilling secured additional financing at the end of Q2, a weaker oil price and lack of new contract wins at higher day rates have put the timing of a drill market recovery into question. Despite the corporate tax rate cut, State Bank of India was weak as asset quality concerns resurfaced during the period.

We have, however, seen tentative signs of stabilisation and recovery in the memory market, which drove our largest holding Samsung Electronics higher during the period. With Q2 earnings likely having marked a bottom, we expect investor focus to turn towards the company's strong competitive position and potential for accelerating shareholder returns in 2020/21. We also enjoyed strong returns from company-specific events in some of our Brazilian holdings. Rail operator Rumo continued to deliver solid operating results and may be a potential beneficiary of a US-China trade war. Holding company Cosan performed strongly on the back of the simplification of its structure and a tender offer to buy back some of its shares, in which we participated. Marfrig rose strongly as it called off its unfavourable merger plans with BRF and announced a plant-based protein joint venture with Archer-Daniels. We eventually exited the position as the shares went beyond our target price.

Portfolio activity

In addition to Marfrig, we also exited our positions in CCU and the recent Naspers spin-off Multi-Choice Group as they reached our target prices. We also sold our recently initiated holdings in pulp producer Suzano and hotel operator Shangri-La as our initial investment theses proved more challenging than previously assumed. This was due to greater cyclical concerns and a re-assessment of the companies' ability to manage these.

Photo: Bloomberg

We received another Naspers spin-off in the form of Amsterdam-listed Prosus, which is an investment vehicle containing Naspers' non-African assets. The realisation of the value in Nasper's constituent parts has been a core part of our investment thesis and one that continues to play out. We also added Royal Dutch Shell, which we believe offers a highly attractive and predictable risk/reward proposition, to the portfolio. With approximately 60% of upstream assets in emerging markets and a growing Asian gas exposure, Shell is a good example of attractive and discounted emerging markets exposure through developed markets listings, which is a core part of our investment universe. We are attracted by the strict capital allocation discipline of the company, its focus on managing the energy transition and the stock's defensive characteristics from a strong balance sheet and sustainable 6% dividend yield.

Outlook

In aggregate, the SKAGEN Kon-Tiki portfolio remains attractively valued and true to the team's value-based investment philosophy. As of September 2019, the portfolio consists of 47 companies trading on 10x 2019 P/E and 1x P/B. This compares with the MSCI EM index on 13x and 1.5x respectively. As a result, we see material upside to our portfolio, which we expect to be crystallised over the next 18-24 months.

The fund selects low-priced, high-quality companies, mainly in emerging economies.

The objective is to provide the best possible risk adjusted return.

The fund is suitable for those with at least a five year investment horizon.

Important information

Unless otherwise stated, performance data relates to class A units and is net of fees. AUM data as of the end of the previous month. Except otherwise stated, the source of all information is SKAGEN AS. Historical returns are no guarantee for future returns. Future returns will depend, inter alia, on market developments, the fund manager's skills, the fund's risk profile and subscription and management fees. The return may become negative as a result of negative price developments. You can download more information including subscription/redemption forms, full prospectus, Key Investor Information Documents (KIID), General Commercial Terms, Annual Reports and Monthly Reports from our local websites or our local representatives. Statements reflect the portfolio managers' viewpoint at a given time, and this viewpoint may be changed without notice. This report should not be perceived as an offer or recommendation to buy or sell financial instruments. SKAGEN AS does not assume responsibility for direct or indirect loss or expenses incurred through use or understanding of this report. Employees of SKAGEN AS may be owners of securities issued by companies that are either referred to in this report or are part of a fund's portfolio.

The benchmark index is the MSCI EM Index (net total return), this index did not exist at the inception of the fund and consequently the benchmark index prior to 1/1/2004 was the MSCI World AC Index. This is not reflected in the table/graph above which shows the MSCI EM Index since the funds inception.
